INITIATIVE TYPE

Compliance

Team Members — Education & Training

AyniHealth Compass allows you to track the project's progress using the outlined steps.

The next step in Compass requires setting up the project by setting Key Performance Indicators (KPIs), Risks, and Return On Investment (ROI) objectives.

In this setup step, you must establish at least one KPI to advance. This ensures your project team remains aligned with the overall objectives by allowing you to track and trace progress throughout the project lifecycle.

+ Add KPI

The risk register facilitates the initial entry and ongoing monitoring of risks throughout the project lifecycle. New risks can be added as they emerge. Each risk can be assigned to a team member and graded by severity. A summary of the mitigation plan can be included and linked to a Catalyst task, if required. Risks may also be accepted, requiring no further action.

During the build phase, you have the flexibility to integrate Catalyst Task Lists and Learning Challenges directly into each project phase. These elements, which can be designated as either required or optional, are designed to assist your team in achieving alignment, implementing necessary changes, and sustaining momentum over time.

The next step provides you with a one-page summary to monitor your project's progress easily. Ideal for update meetings, this visual summary consolidates your outstanding tasks, identified risks, and team learning challenges. It also includes information on your performance against the project schedule.

Finally, once your project is complete, AyniHealth will help you with a bookending review summary that can be easily shared with your management and your team. It will generate a customized survey with around 10 questions that captures the organisational wisdom gained through this project, giving you an unbiased report of your progress, your bottlenecks and things to improve for next time.

### ✦ Bookending Review

Generate a personalised exit interview based on your project data and champion insights.

✦ Generate Exit Interview

Tailored from your KPIs, milestones, risks, and completion data below

Data used to generate your exit interview

Completion: 0%Criteria: 1Ensure 90% of team trained prior to go-live: 60 / 90 Training Complete ⚠

1. How satisfied are you with the overall progress in achieving your training KPI of 90% completion by go-live?

Given that only 60 out of 90 team members have been trained to date — well below your go-live target — how satisfied are you with the overall progress in achieving your training KPI?

1

2

3

4

5

Very dissatisfied — we're unlikely to meet the target before go-liveVery satisfied — we're on track to meet or exceed the 90% target

2. Have the unresolved risks — 'not enough staff' and 'inadequate documentation' — significantly hindered your ability to deliver this initiative?

Two high-impact risks remain unresolved: 'not enough staff' and 'inadequate documentation'. Have these risks significantly hindered your ability to deliver the training initiative?

Yes

No

3. What has been the most significant barrier to increasing training completion from 60% to the target of 90%?

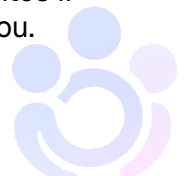

What has been the most significant barrier to increasing training completion from 60% to the target of 90%?

Insufficient staffing to deliver training

Lack of clear or accessible training materials

Competing departmental priorities

Any project can be saved and reused, capturing all the changes you might have made during the process and allowing you to share your learnings with you colleagues, even other sites if you are allowed. AyniHealth is focussed on sharing and community support, it's up to you.

## 2) Discovering the Catalyst Dynamic Checklists for collaborative tasks

Catalyst checklists can be accessed via the App Home page and the Menu on the top of any page.

The screenshot shows the Catalyst Collaborative Tasks interface. At the top, there's a header with the Catalyst logo and a note: "Based on your organization role, you can create templates. Template creation is managed in dedicated administrative pages, not here." Below this is a section for "AyniHealth Demo Access Templates" with a right arrow. The main content is divided into two sections: "Team Shared Catalyst Workflows" and "My Catalyst Workflows".

**Team Shared Catalyst Workflows**

- Demo Team New Clinician Onboarding Template** (Education & Training)
  - A generic onboarding template to be used for a new clinician
  - 0/1 top-level done (0%)
  - Owner: Demo Member

**My Catalyst Workflows**

- Demo Go-Live Pre-Requisites** (From Template)
  - Demo site go-live Catalyst Template
  - 3/11 top-level done (27%)
  - Created 30/03/2026
- New Clinician Onboarding Template - Demo** (From Template)
  - A generic onboarding template to be used for a new clinician
  - 0/1 top-level done (0%)

A "+ Create Task List" button is located on the right side of the "My Catalyst Workflows" section.

At AyniHealth, we want to make change easy and remove risk, a project can automatically allocate an agreed Catalyst task list to all team members on set up. Here you can see that a New Clinician Onboarding Template has been allocated automatically to my workflows. I can also add or create other task lists by selecting the + button on the bottom right or the + create task list button.

The screenshot shows the "Create Task List" modal. It is divided into three sections: "Ayni Templates", "AyniHealth Demo Access Templates", and "My Lists".

**Ayni Templates** (Pre-built workflows available to everyone)

- New Clinician Onboarding Template** (by Matthew Vigar)
  - A generic onboarding template to be used for a new clinician
  - Updated 16/03/2026
  - 8 deployments
- Generic 6-monthly Planned Maintenance Check** (by Matthew Vigar)
  - AyniHealth Customer Electronic Copy of the 6 Monthly Planned Maintenance Checklist for a Generic Linac
  - Updated 18/03/2026
  - 13 deployments
- Generic Master Test Plan** (by Matthew Vigar)
  - Documentation with detail to test field plans and test items
  - Test scripts for use within the test suite
  - Template 03/03/2026
- Generic Cloud Migration Project Plan** (by Matthew Vigar)
  - AyniHealth template to cloud migration high level
  - Template 03/03/2026

A "Show all 17 templates" button is located below the "Ayni Templates" section.

**AyniHealth Demo Access Templates** (Templates from your organization)

- New Clinician Onboarding Template** (AyniHealth Demo Access)
  - A generic onboarding template to be used for a new clinician
  - Updated 31/03/2026
  - 0

**My Lists** (Clone from your existing lists)

A "+ Personal" button is located at the bottom right of the "My Lists" section.

Here, you have several options for managing your templates and tasks:

### Template Access:

- **Public Templates:** Browse and clone any of AyniHealth's public templates, which you can then save as your own.
- **Organizational and Team Templates:** Access templates shared within your team or organization. Access to these is restricted to protect your intellectual property (IP) and privacy.
- **Creating New Templates:** Start a new template from scratch.

### Task Management:

- **Personal Use:** Use AyniHealth to manage your own personal task lists.

### How to Clone a Template:

Simply select the desired template, rename it, and choose the 'Create from Template' option.

Use Template: Generic Go-Live Pre-Requisites

[Back to templates](#)

This will create a new todo list based on the "Generic Go-Live Pre-Requisites" template, including all its tasks and structure.

New List Title \*

Demo Go-Live Pre-Requisites

Description

AyniHealth generic go-live Catalyst Template

CancelCreate from Template

You are now able to edit your Catalyst Checklist Template as you need to.

The screenshot displays the Catalyst Checklist Template interface. On the left, a sidebar titled 'Demo Go-Live Pre-Requisites' shows a progress bar at 0% and an 'Export PDF' button. The main area features a checklist with tasks such as 'Go-Live Readiness Report', 'Secure Connection is established', 'Devices connected and tested in Pre-Production environment', 'Each Interface built in Pre-Production is tested and accepted', 'Platform SSO established and tested', 'Cutover Plan / Roll back planned established, reviewed and approved', 'All test exit criteria met', and 'All inter-dependencies tested and accepted'. Each task has a checkbox, a list icon, and action buttons (edit, add, link, delete). At the top right, there are buttons for 'Expand All', 'Collapse All', 'Mark All Done', 'Mark All Incomplete', and 'Delete All'. An 'AI Generate' button is located at the bottom right of the task list.

We've included a quick AI Generate tool to simplify startup and use. This feature automatically creates a Catalyst Template from existing files. To use it, simply click **AI Generate**.

The AI Task Generator is straightforward:

1. Describe the procedure.
2. Add the protocol or SOP.
3. Select the desired level of detail.

For projects involving sub-tasks, we recommend selecting '**Detailed**' and then '**Generate Tasks**'. Please remember to review the generated output, as AI may occasionally make errors.

This screenshot is a zoomed-in view of the Catalyst Checklist Template interface, focusing on the task list. It shows the same set of tasks as the previous screenshot, including 'Go-Live Readiness Report', 'Secure Connection is established', 'Devices connected and tested in Pre-Production environment', and 'Each Interface built in Pre-Production is tested and accepted'. The interface includes buttons for 'Expand All', 'Collapse All', 'Mark All Done', 'Mark All Incomplete', and 'Delete All' at the top. An 'AI Generate' button is positioned at the bottom right of the task list.

You can re-order and edit tasks, adding sub-tasks, conditional questions, and setting required delivery dates.

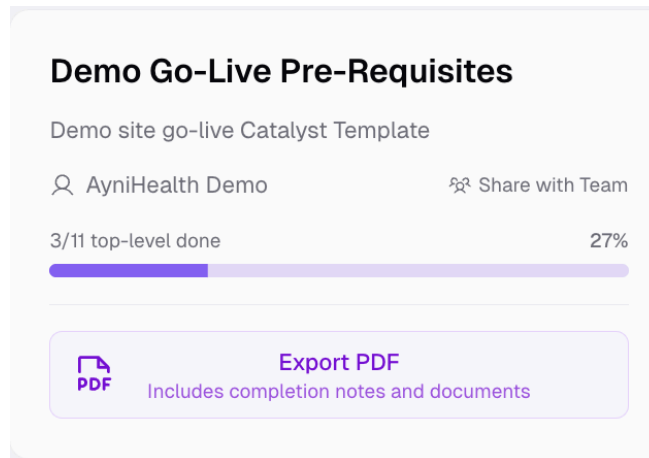

A screenshot of a task creation modal. At the top, it says "Secure Connection is established" with a sub-note "VPN and/or Express Route connection information noted". Below this are input fields for "Subtask title...", "Description (optional)", a date picker set to "mm/dd/yyyy", and a "Conditional question (optional)". At the bottom are "Add Subtask" and "Cancel" buttons. In the top right corner of the modal, there are icons for edit, add, link, and delete.

To complete a task, click the box in the top right corner. You will then be prompted to add 'Completion Notes and Files,' which allows you to keep all necessary information together for audit purposes.

A screenshot of the AyniHealth dashboard. On the left, a sidebar shows "Demo Go-Live Pre-Requisites" with a progress bar at 9% and an "Export PDF" button. The main area displays a task list with buttons to "Expand All", "Collapse All", "Mark All Done", "Mark All Incomplete", and "Delete All". A modal titled "Go-Live Readiness Report" is open, showing a "Completion Notes & Files" section with a text area for notes, an "Add Files" button (5 slots remaining), and "Cancel" and "Save" buttons.

For weekly updates or to share progress with staff who do not use AyniHealth, you can export a PDF copy of the Catalyst progress, which includes completion notes and associated documents.

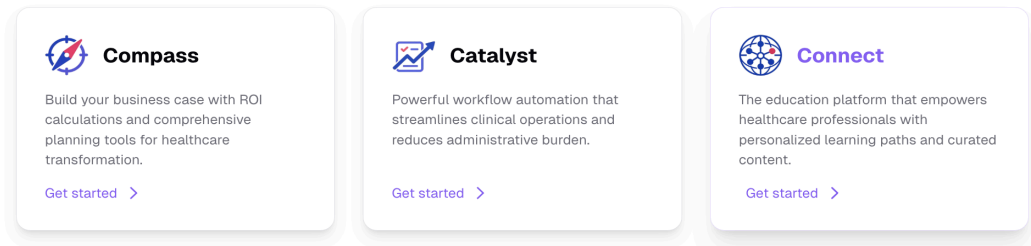

Catalyst task lists are dynamic and time-bound, allowing you to add new tasks and track progress and performance even while they are in use. These lists can be shared with collaborators within your organization or team, or made public if you intend to offer assistance to a wider audience.

With the team **Aligned** via Compass and the change **Implemented** using Catalyst, the next step is to **Sustain** this change. This is achieved through gamified, user-friendly learning challenges.

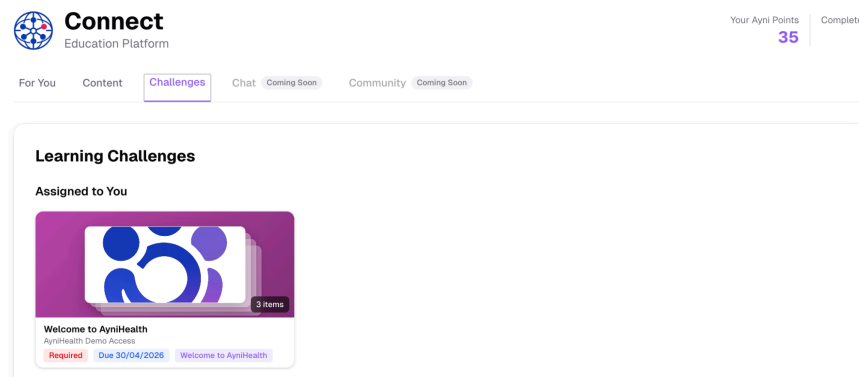

### 3) Sustain the Change with Connect

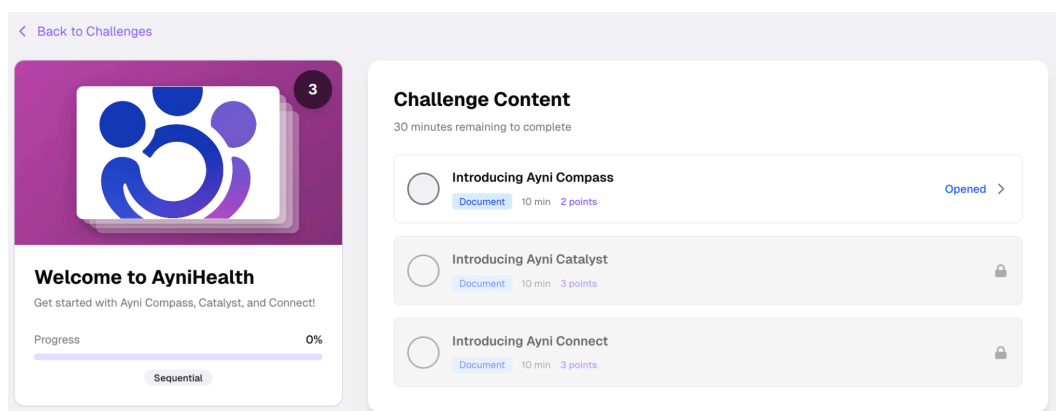

#### Apps

Connect is AyniHealth's integrated education platform offering curated content, a secure community for team or organisation chat, and AyniHealth Challenges. Challenges can be customised for teams, techniques, departments, or organisations, and can also be shared publicly. All content is gamified, allowing users to earn 'Ayni Points' for fun learning, credentialing, and collaboration.

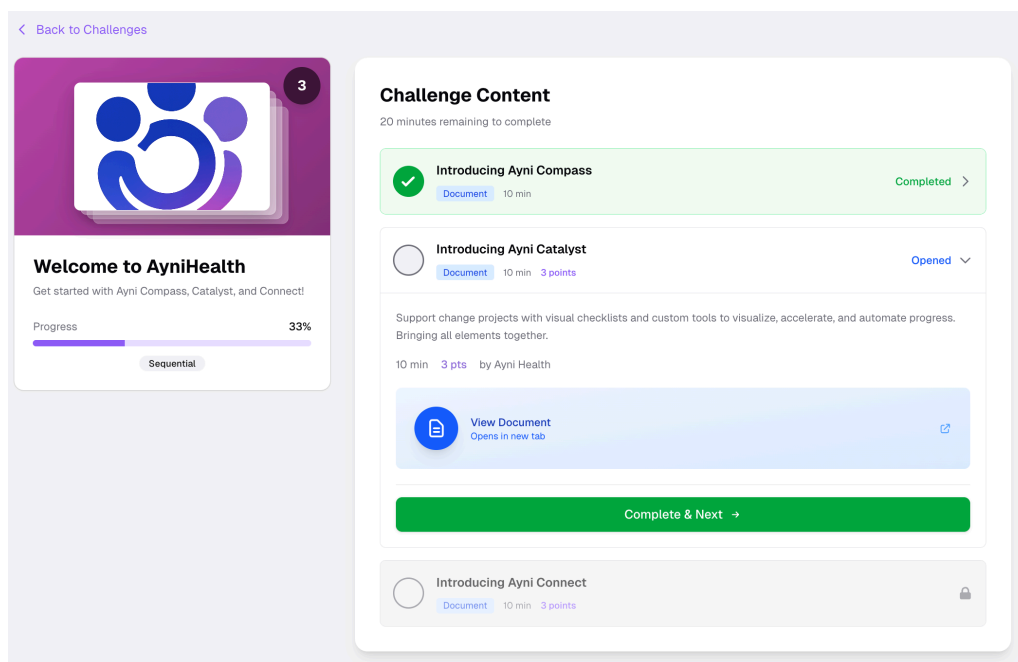

AyniHealth challenges are auditable, reportable, and can be assigned by an administrator or browsed by a user, sequentially, mandatorily, and with time limits. They are used in projects to align and educate teams.

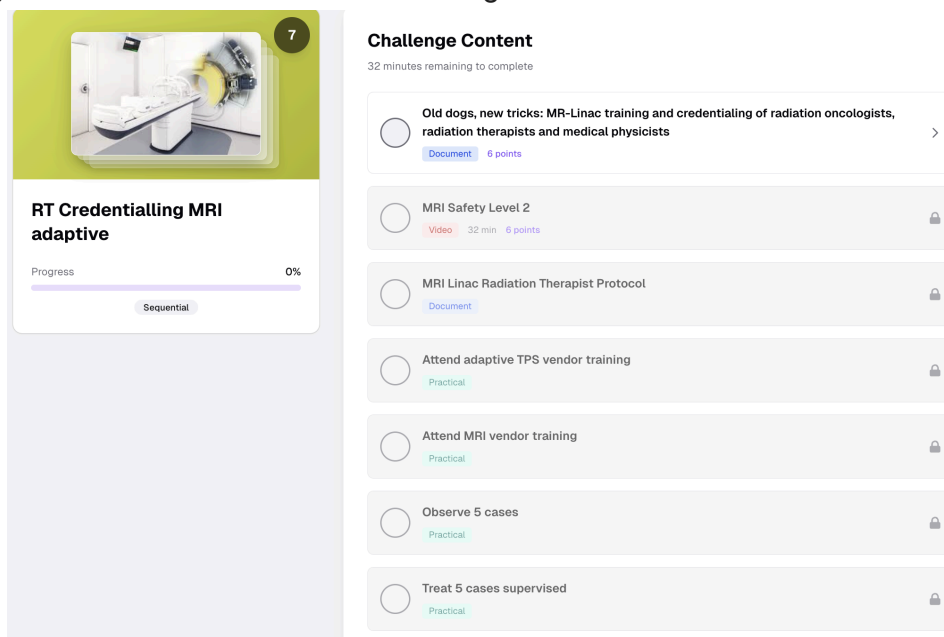

AyniHealth Challenges can be used to update current procedures, establish new techniques, implement new technologies, ensure clinicians are credentialled and sustain change in daily practice long after the vendor has left.

AyniHealth offers a versatile platform for delivering challenge content. This content can be sourced externally, hosted on our system, or maintained within your organization, and is accessible across any location or workflow, even behind paywalls. We excel in Annual Clinical Credentialing, where we integrate vendor training and local regulatory requirements with practical competence checks. All challenge content is fully reportable and easily auditable. It can be implemented as a mandatory "toll-gate" within a project plan to guarantee your team's alignment and readiness before critical go-live milestones.

## Automatic CPD tracking

AyniHealth also supports automated CPD tracking for multiple organisations, coming soon is

the ability for this to be added from external sources using easy upload functionality.

The screenshot shows a user profile for 'AyniHealth Demo' with email 'demo@ayni.health' and 'Ayni Champion Member' status. The 'CPD Tracking' tab is active, displaying '10 Total CPD Points' (1 from content, 0 external) and 'Last earned: Mar 31, 2026'.

#### 4) AyniHealth Organisational Dashboard (Admin Users Only)

At AyniHealth we know you are busy and managing projects isn't your full time job. So we have designed an organisational dashboard where you can manage your team at a glance with ease.

The dashboard provides a comprehensive overview of team performance. Key metrics include Seat Usage (2/210), Learning Hours (0), Challenges Completed (1), and Subscription status (3 months remaining). It also features a 'Criteria Tracking' table with filters for rows and columns, and a legend for completion status.

**AyniHealth Demo Access**

## 5) Creating your own AyniHealth Challenge

Only Administrators can create AyniHealth Challenges and this can only be done via your organisational dashboard

In the Organisation Content Dashboard, use 'Manage Content' to upload and handle content. Note the details on Content Visibility.

**Content Visibility Guide**

- **Organization content** is visible to all members of your organization
- **Team content** is only visible to members of specific teams
- Content creators can set visibility when creating new content
- Use [Challenges](#) to organize content into structured learning paths

Easily add and organise content into AyniHealth Challenges. Promote products publicly, if desired. Content can be uploaded or linked, with options to set visibility, allocate AyniHealth and CPD points, and draft for later publishing.
